## Summary

I possess an analytical mind and am curious about the future of the world's progression in digital technology and philosophy. I am a tech enthusiast who enjoys building PCs, playing video games, and troubleshooting software or hardware-related issues.

I have a solid understanding of Java, C#Sharp, SQL and recently Python, and I have tutored Java for first-year students while completing my undergraduate final year. I aim to gain footing in IT as a junior software developer for local tech corporations.

## Experience

### Student Tutor

IIE Rosebank College

Sep 2022 - Dec 2022 (4 months)

Working part-time as a tutor for Java helped me improve my developing, leadership and planning skills. I had to leave my comfort zone and teach in front of a room filled with over 50 students. As the weeks passed while working at the college, I began to find myself explaining concepts with more confidence. At the end of my contract as a programming lecturer, I further developed my Java skills and understanding of OOP.

## Education

### Rhodes University

Advanced Diploma in Business Analysis,, Business/Commerce, General

2023 - 2023
