Summary

I possess an analytical mind and am curious about the future of the world's progression in digital technology and philosophy. I am a tech enthusiast who enjoys building PCs, playing video games and reading.
I have a solid understanding of Java, C#Sharp, SQL, and recently, Python, and I have tutored Java for first-year students while completing my final year of undergraduate study. I aim to gain footing in IT as a junior software developer for local tech corporations.

Experience

Tutor
IIE Rosebank College
Sep 2022 - Dec 2022 (4 months)
Working part-time as a tutor for Java helped me improve my developing, leadership and planning skills. I had to leave my comfort zone and teach in front of a room filled with over 50 students. As the weeks passed by working at the college, I began to find myself explaining concepts with more confidence. At the end of my contract as a programming lecturer, I further developed my Java skills and understanding of OOP.
